Технические характеристики на модульные импульсные преобразователи DC 3000 CAN бренда AEG Power Solutions

DC 3000 CAN

Modular switch-mode converter designed for industrial applications

Output current of a single power supply:
100 A (for 24 VDC)

The DC 3000 from AEG Power Solutions is a DC/DC-Converter, converting either 110 VDC or 220 VDC to 24 VAC with an output current of 100 A. The switch-mode power supply is fed by the secure 110 V or 220 VDC supply for high operating reliability.

Low volume thanks to a high switching frequency

The equipment is powered by DC voltage. Transistors produce an alternating voltage with a frequency of 75 kHz. With the assistance of transformers, potential separation and the voltage adjustment are on the secondary side. The high frequency AC voltage is then rectified by means of rapid acting diodes. An output filter is installed to reduce the voltage ripple. The output voltage and current are controlled by pulse-width modulation of the transistor switch on the primary side.

Typical applications

Industrial applications such as 24 VDC power to supply power to control technology systems in nuclear and conventional power stations, chemical industrial processes and electrical sub-stations.

FEATURES

- Compact design which is lightweight
- High power density
- High efficiency
- Low voltage ripple
- Low inrush current
- Resistant to sustained short circuit, double current as short circuit for one second
- Communication capable (CAN-Bus)
- Single mode or parallel mode also without CAN-Bus
- CE-compliant

BENEFITS

- **Compact Design:**
19" rack with 4U in height and a mounting depth of only 270 mm. The converter can be set up in the smallest space thanks to parallel connections built on the n+1 principle.
- **Easy Operation:**
The switch mode power supply is a pre-wired unit. The connections can be easily accessed from the front panel. Programming is simple as controls and indicators are embedded in the front panel.
- **Communication:**
The unit offers full functionality in stand-alone mode but can additionally be controlled and monitored via the digital CAN-Bus which is immune to interference.
